智能压力变送器

Smart pressure transmitter

3151 系列

智能压力变送器

3151 series
Smart pressure transmitter

产品简介

3151 系列智能压力变送器作为一种高精度智能型的现场压力参数的检测仪表，可以用来测量各种介质在液体、气体和蒸汽状态下的差压、压力、液位等参数，与节流装置配合还可以测量流体的流量参数，并将被测的压力参数转换成 4-20mA 标准电信号输出，该输出可作为指示、记录和各种控制、调节系统的输入信号，变送器同时采用 HART 协议传输数字信号，具有与手操器或上位机进行通讯的功能，变送器具有输出参数组态功能，能适应不同用户的需求。它可以精确地测量小差压至大差压、低压力至高压、液位、真空度和比重。DP / GP 型压力 / 差压变送器配上远传密封装置后，可避免被测介质直接与变送器的隔离膜片接触，对不能直接进行测量的介质提供了一种可靠的测量方法。

本产品外形精巧，重量轻，测压接口兼容 3151 普通型智能差压 / 压力变送器，可全系列替代市场上广泛使用的 1151、3051 系列模拟式或智能式差压 / 压力变送器使用。

Brief introductions of products

3151 series smart pressure transmitter is a high-accuracy intelligent type field pressure parameter inspection instrument, can measure differential pressure, pressure and liquid level of various medium in liquid, gas and vapour. It can also measure the flow rate parameter of the liquid when matched with throttling devices, and transfer the measured pressure parameter into 4-20mA standard electric signal output. The output can be used as the input signal of indication, record and various control and adjust system. The transmitter adopts HART protocol to transmit digital signal, can communicate with hand operated device or PC, it can also output parameter configuration which can meet different user requirements. It can measure precisely from micro differential pressure to large differential pressure, from low pressure to high pressure, as well as liquid level, vacuity and proportion. When matched with remote transmission sealing device, DP / GP type pressure / differential pressure transmitter can prevent measured medium from contacting the isolation diaphragm, which supply reliable measuring modes for medium that can't be measured directly.

This product is with light weight, the pressure measuring interface is compatible with 3151 ordinary type smart differential pressure / pressure transmitter, which can replace the market widely used 1151, 3051 series analog or smart differential pressure / pressure transmitter.

产品特点和工作原理

3151 系列智能压力变送器有以下特点：

- 1、完整的变送器系列：包括差压、压力、绝对压力、法兰和远传等系列变送器。
- 2、完整的测量范围：0-0.15kPa~42MPa。
- 3、采用固体、插接式印制线路板。
- 4、结构小巧、坚固、抗振。
- 5、非接触式就地零点、量程调整和 LCD 液晶显示参数组态按钮。
- 6、模块化结构。
- 7、阻尼可调。
- 8、多种选择、应用灵活。
- 9、智能电路。
- 10、具有独立抗电磁干扰电路和软件抗干扰设计。

3151 series smart pressure transmitter has the following features:

- 1、Complete transmitter series: including differential pressure, pressure, absolute pressure, flange and remote transmission series transmitter
- 2、Complete measuring range: 0-0.15kPa~42MPa
- 3、Adopt solid, plug-in type printed wiring board
- 4、Small and solid structure which is shakeproof
- 5、Non-contact onsite zero button, range adjustment button and LCD parameter configuration button
- 6、Modularized structure
- 7、Adjustable damping
- 8、Various models and flexible application
- 9、Smart circuit
- 10、With independent anti-electromagnetic interference circuit and software anti-interference design.

CEPAI GROUP CO., LTD.

智能压力变送器

Smart pressure transmitter

3151 系列
3151 series

工业领域领先的性能和特性:

3151 系列智能变送器可准确测量流量液位、表压、绝压、真空度和比重。具有全金属密封的差动电容压力传感器的 δ 室结构创新设计，使差压(压力)和温度测量实现了重大改进和良好的稳定性。

小巧的设计，一体化接线盒和本机零点和量程调整和LCD显示组态按钮，使安装、校验和运行简化。

外壳具有通用符合IP65标准防护型及隔爆型两种可供选择。电路板与接线分离成为两个室结构。大多数型号，都可提供腐蚀性场合所用的316L SST或钽，哈氏合金c等防腐性材料。模块化结构和插拔式线路板有助于故障检修及减少备件库存。

advanced performance and features among industrial field:

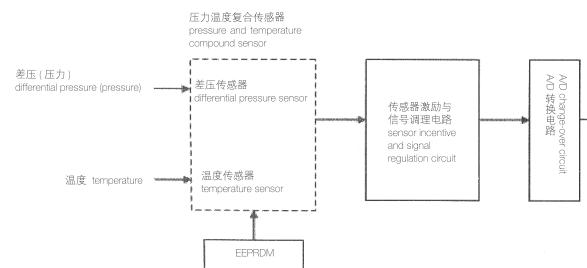

3151 series smart transmitter can measure precisely liquid level, gauge pressure, absolute pressure, vacuity and proportion. With innovate δ chamber design of differential capacitive pressure sensor which is all metal sealed.

Flexible design, unified junction box, zero location and range adjustment button, LCD parameter configuration button makes it easy to install, calibrate and operate.

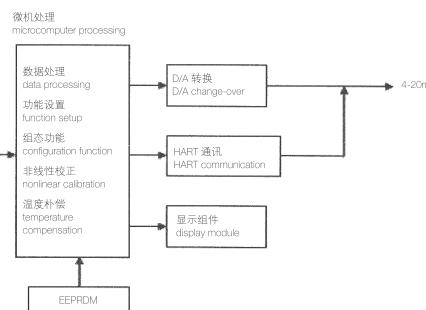

The sell is optional between IP65 standard protection type and explosion proof type. Circuit board and wiring are separated into two-chamber structure. For most models, 316L, SST, tantalum or Hastelloy alloy-c are available in corrosive places. Modularized structure and plug-in type circuit board help to repair and reduce spare parts.

工作原理

3151 系列智能压力变送器工作原理框图见图 1。

Working principle diagram of 3151 series smart pressure transmitter is seen in picture 1.

Picture 1 3151 series smart pressure transmitter working principle diagram

被测介质的压力作用于压力、温度复合传感器上的 δ 室的正压端隔离膜片(LT型液位变送器和带毛细管的DP/GP远传型变送器则是被测压力先经过一次隔离膜片和充满硅油的全密封的毛细管系统再被传到 δ 室的隔离膜片)再通过 δ 室中的灌充硅油传递到中心的测量膜片上使其产生相应的位移，测量膜片是一种预张紧的弹性元件，其位移与被测介质的压力成正比，最大的位移量约为0.08mm，测量膜片的位置变化由它两侧的电容固定极板通过电容量的变化检测出来。使传感器的测量膜片和两固定电容极板的电容量发生变化。除AP型绝对压力变送器，其测量膜片的另一侧(负压端)是绝对真空基准点外，其它品种的测量膜片的负压端与被测差压的低压侧或大气相通。在 δ 室的正压端嵌有高精度的温度传感器，用于检测传感器本体的温度变化，由于 δ 室的正压端与被测介质直接接触，所以同时可获得与传感器所接触的介质的温度信息。

Pressure of measured medium acts on the positive pressure end isolation diaphragm of the pressure and temperature compound sensor δ chamber, and then transfers to the central measuring diaphragm through filling silicon oil in δ chamber, to make corresponding displacement. Measuring diaphragm is pretension elastic element of which the displacement is in direct ratio to the pressure of measured medium, the max displacement is about 0.08mm, the measuring diaphragm location variation is detected out through the capacitance variation of the capacitance fixed polar plate. The negative pressure end of other type of measuring diaphragm is interlinked with the measured differential low pressure end or the atmosphere, except the AP type absolute pressure transmitter of which the measuring diaphragm's negative pressure end is absolute vacuum datum point. There is high-accuracy temperature sensor in the positive end of the δ chamber, to detect the temperature variation. The positive end of the δ chamber contacts the measured medium directly, thus, you can obtain temperature information of the medium that contacts the sensor.

智能压力变送器

Smart pressure transmitter

3151 系列
3151 series

P-010

传感器的电容量变化，通过特定的高频激励与检测电路将其转换为直流电信号，通过信号调理电路转换为一定幅度的电压信号，经 A / D(模拟 / 数字) 转换为数字量的信号送至 CPU 处理，所检测到的温度信号同样转换为数字信号送至 CPU 处理、上述两个信号经微处理器的程序运算，并经 D / A(数字 / 模拟) 转换以及 HART 通信电路处理，将压力及温度参数转换成所需的 4~20mA 标准直流电流信号及符合 HART 协议的数字信号并调制在二线制电流信号上，提供给用户使用，同时驱动显示器显示。变送器内置的微处理器在计算机程序 (软件) 的支持下完成所需的特定功能。

在变送器的传感器组件与 CPU 电路板中设置了专门用于存储传感器特征信息的存储器芯片，用于传感器出厂特征数据的保存，实现关键参数冗余保护及便于传感器组件与 CPU 电路板的更换。

High frequency incentive and detection circuit transfer the sensor capacitance variation to direct current electric signal, turn to pressure signal of some amplitude through signal regulation circuit, switch to digital by A/D(analog / digital) and then send it to CPU. The detected temperature signal is turned into digital signal as well and sent to CPU. The above two signals are operated by microprocessor, switched by D/A(digital/analog) and processed by HART communication circuit, then, transfer temperature and pressure parameters to 4~20mA standard direct current signal and digital signal in accordance with HART protocol, and, modulate them to two-wire system current signal, supply them to users, at same time, drive the display to display. The inner set microprocessor completes special functions with help of the computer program.

There is memorizer chip set inner the sensor assembly and CPU circuit board that is for storing information of sensor characteristics specially, to store the original set data, realize key parameter redundancy protection, and be easy for change-over between sensor assembly and CPU circuit board

产品基本性能及主要功能

1. 测量参数类型：
差压、表压、绝对压力任意选择一种

2. 测量范围：
差压：0-0.15kPa~7 MPa(按不同的量程段选择传感器)
表压：0-0.1 5kPa~42 MPa(按不同的量程段选择传感器)
绝压：0-40kPa~7 MPa (按不同的量程段选择传感器)

3. 与传感器接触的介质温度范围： -40~85°C

4. 显示参数

测量压力值
输出模拟电流值
被测压力对应设定量程的百分比值
传感器本体与其接触介质的温度值

5. 输出信号：

1)4~20 mA DC 压力参数模拟信号与压力、温度数字信号，使用 HART 协议。
2) 压力、温度、百分比量程全数字信号，使用 EPA、FF、或 Profibus-PA 现场总线协议。

6. 主要组态功能

零点迁移、量程、工程量单位、阻尼时间、超限报警、输出 4~20 mA 电流标定、写数据保护、输出函数、出厂数据恢复。

7. 防爆等级：ExdIICT6(隔爆型)
Exia II CT6(本质安全型)

8. 外壳防护等级：IP65

Products performances and functions

1.Types of measuring parameter:

Differential pressure, gauge pressure, absolute pressure are optional

2.measuring range :

Differential pressure: 0-0.15kPa~7 MPa(select proper sensor according to different ranges)
Gauge pressure: 0-0.1 5kPa~42 MPa(select proper sensor according to different ranges)

Absolute pressure: 0-40kPa~7 MPa (select proper sensor according to different ranges)

3.Temperature range of the medium contacting the sensor: -40~85°C

4. parameters

measuring pressure
output analog current
Percentage of the setting range corresponding to tested pressure
Temperature of the sensor body and the contacted medium

5.output signal:

1)4~20mA DC pressure parameter analog signal, pressure and temperature digital signal are with HART protocol
2)Pressure, temperature, percentage range digital signal are with EPA、FF、or Profibus-PA field bus protocol

6. main configuration function:

Zero shift, range, engineering unit, damping time, ultralimit alarming, output 4~20mA current calibration, write data protection, output function, factory data recovery

7.Explosion proof grade: ExdIICT6 (explosion-proof type)
Exia II CT6(intrinsic safety type)

8.Enclosure protection class: IP65

产品选项介绍

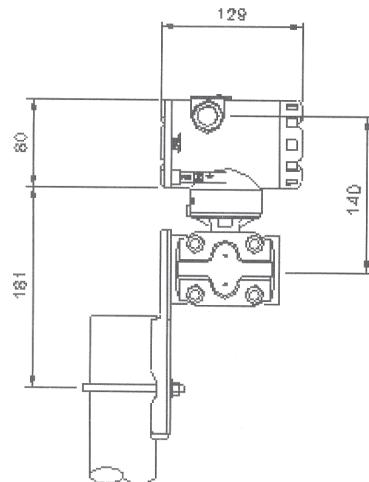

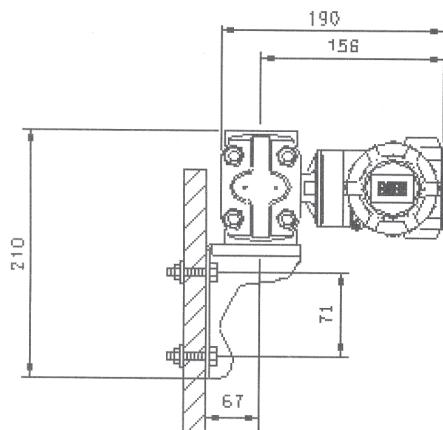

以下为 3151 型变送器各种可选的选项，这些选项给应用带来了更大的灵活性。

安装支架 mounting bracket:

Introduction of production options

The following are various options of 3151 type transmitter which make more flexible application.

B1 2 英寸管道安装支架：变送器安装于 2 英寸管道上的支架
碳钢结构，配有碳钢 U 型螺栓，聚氨酯喷漆

B1 2-inch pipe mounting bracket: bracket mounted on 2-inch pipe
Carbon steel structure, matched with carbon steel U-shaped bolt,
painted polyurethane

B2 面板安装支架：变送器安装于面板或墙上用的支架
碳钢结构，配有碳钢螺栓，聚氨酯喷漆

B2 panel mounting bracket: bracket mounted on panel or wall
Carbon steel structure, matched with carbon steel bolt, printed
polyurethane

B3 2 英寸管道安装平支架：变送器垂直安装于 2- 英寸管道上的支架
碳钢结构，配有碳钢 U 型螺栓，聚氨酯喷漆

B3 2-inch pipe flat mounting bracket: bracket mounted on 2-inch pipe
vertically
Carbon steel structure, matched with carbon steel U-shaped bolt,
painted polyurethane

3151TG

智能型压力变送器

3151TG
Smart pressure transmitter

- 隔离硅压阻传感器
- 超低温度漂移影响
- 可满足各种恶劣工业环境
- 典型运用：工业流程控制

- isolated silicon piezoresistive sensor
- ultra low temperature drift influence
- suitable to various hostile industrial environment
- typical application: industrial process control

主要技术参数 main technical parameter				
量程范围 range	正表压 positive gauge pressure		负表压 negative gauge pressure	
	最小范围 min	最大范围 max	最小范围 min	最大范围 max
	5kPa	60MPa	-5KPa	-100KPa
精度等级 accuracy class	0.2%F.S., 0.5%F.S.			
工作电压 working pressure	13~45VDC, 24VDC			
输出信号 output signal	4~20mA, 1~5VDC, HART 可约定			
温度范围 temperature range	补偿温度 temperature		介质温度 medium	储存温度 storage
	0~50°C, -10~80°C, 可约定		-40~85°C	-40~85°C
温度影响 temperature influence	0.02%F.S./°C			
电气连接 electrical connection	接线端子 wiring terminal			
防护等级 protection class	IP65			
螺纹接口 thread interface	M20*1.5 外螺纹, 可约定 male thread			
外壳材质 enclosure material	低铜铝合金 low copper aluminum alloy

DP/GP 型差压 / 压力变送器

DP/GP type differential pressure / pressure transmitter

带 1199 远传法兰的 3151 系列

DP/GP 型差压 / 压力变送器

3151 series with 1199 remote transmission flange
DP/GP type differential pressure/pressure transmitter

3151DP / GP 型变送器带上 1199 型远传密封装置法兰 (其种类见表)1~10 后, 就成为 3151DP / GP 型远传压力变送器。

这种 3151DP / GP 远传差压、压力变送器给用户提供了一种避免被介质直接与变送器的隔膜片接触的测量方法。它适用于下面几种情况:

1. 被测介质对变送器接头和压力传感器有腐蚀作用时
2. 需要将高温被测介质与变送器隔离时
3. 被测介质中有固体悬浮或高粘度易堵塞变送器的接头时
4. 被测介质因环境温度或程度变化出现固化或结晶时
5. 要换被测介质需要冲洗而不会交混时
6. 必须保持卫生条件 (防污染) 时 3151 DP / GP 带上 1199 的远传压力变送器, 仍具有 3151DP / GP 型差压、压力变送器的各种特点。

3151 series DP/GP type transmitter with 1199 type remote transmission sealing device flange(specifications is in chart) is 3151DP/GP type remote transmission pressure transmitter.

standard 3151GP pressure transmitter with remote transmission device parts avoid contacts between measured medium and transmitter isolated diaphragm and are applicable to the following conditions :

1. When measured medium is corrosive;
2. When there is need to separate high temperature measured medium from transmitter;
3. When there is solid float or high-viscosity joint in the measured medium;
4. When measured medium is solidified or crystallized because of environmental temperature or process variation;
5. When there is need to change and wash the measured medium without mixing ;
6. When you have to guarantee the sanitary condition(without pollution).3151 DP/GP with 1199 remote transmission pressure transmission still has features of 3151DP/GP pressure transmitter.

注意:

下面给出的各种带有 1199 型远传装置的类型的变送器, 供用户选型、订货时查阅, 此外, 还应从表中选择所需的毛细管、填充液一起配合使用。

Note:

The following various transmitters with 1199 type remote transmission devices are for users to select and order, besides, users should select corresponding capillary and filling liquid from table to work with the transmitters.

远传法兰灌充液:

远传法兰灌充液选用应考虑使用的工作温度、灌充液的比重产生迁移量影响程度、是否会超出变送器的测量范围上下限区域等因素。

Filling liquid of remote flange:

When you select filling liquid of remote flange, you shall consider factors like the working temperature, the impact degree of the migration caused by filling liquid proportion, whether it will go beyond the upper and lower limits of the transmitter measuring range, etc.

表 11 远传法兰灌充液订货规格表
