

WZ 系列 装配式热电阻

WZ Series
 Fabricated thermal resistance

概述

工业用热电阻作为测量温度的传感器，通常和显示仪表、记录仪表和电子调节器配套使用。它可以直接测量各种生产过程中从 -200℃ 至 420℃ 范围内的液体、蒸汽和气体介质以及固体表面温度。

根据国家规定，我厂生产符合 IEC 国际标准分度号的 Pt100 铂热电阻和符合专业标准分度号的 Cu50 铜热电阻两大类装配式、统一设计型热电阻，应符合 JB / T8622-1 997 及 JB / T8623-1 997 标准。

Overview

Industrial use thermal resistance is the measuring temperature sensor, usually works with display instrument, recording instrument and electronic regulator. It can be directly measured various production process from a -200 °C to 420 °C within the scope of the liquid, steam and gas medium and solid surface temperature.

We produce PT100 and Cu50 thermal resistance based on national regulations, in accordance with IEC international standard graduation, JB/T8622-1997 and JB/T8623-1997.

主要技术指标 Main tech data

热电阻类别 Type	测温范围 °C Range	分度号 Graduation	允许偏差 $\Delta t^{\circ}\text{C}$ Allowed deviation
WZP 型铂电阻 Platinum resistor	-200~420	Pt100	B 级允差 $\pm (0.30 + 0.005 t)$
			A 级允差 $\pm (0.15 + 0.002 t)$
WZC 型铜电阻 Cooper resistance	-150~100	Cu50	-50~1.00℃ 允差 $\pm (0.30 + 6.0 \times 10^{-3} t)$

注：式中“t”为感温元件的实测温度绝对值。
 Note: "t" in the table is absolute temperature value.

装配式热电阻

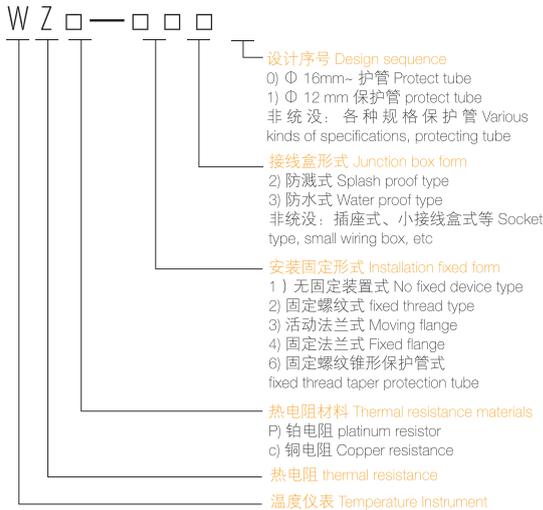

Fabricated thermal resistance

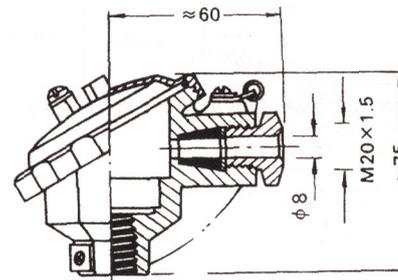

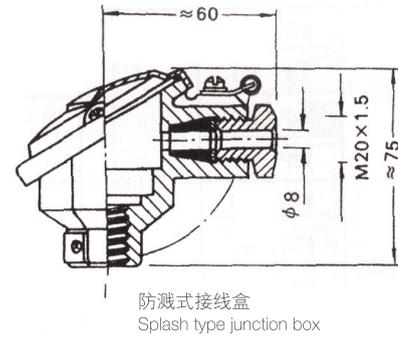

WZ 系列

P-038

型号表示 Type

热电阻接线盒结构 Thermal resistance junction box structure (统一设计型 Unified design type)

热电阻感温元件 100°C时的电阻值 (R_{100}) 和它在 0°C时的电阻值 R_0 的比值 (R_{100}/R_0)

分度号 Pt00: A 级 $R_0=100 \pm 0.06 \Omega$
B 级 $R_0=100 \pm 0.12 \Omega$
分度号 Cu50: $R_0=50 \pm 0.05 \Omega$

Ratio between resistance at 100 °C (R_{100}) and resistance at 0 °C (R_0) (R_{100}/R_0)

Graduation Pt00: A $R_0=100 \pm 0.06 \Omega$
B $R_0=100 \pm 0.12 \Omega$
Graduation Cu50: $R_0=50 \pm 0.05 \Omega$

热响应时间 thermal response time

在温度出现阶跃变化时, 热电阻的输出变化值相当于该阶跃变化的 50%所需要的时间称为热响应时间用 $\tau_{0.5}$ 表示。

When temperature appear step changes, the thermall resistance output change is equal to 50% of this step change, time needed is thermal response time, called as $\tau_{0.5}$

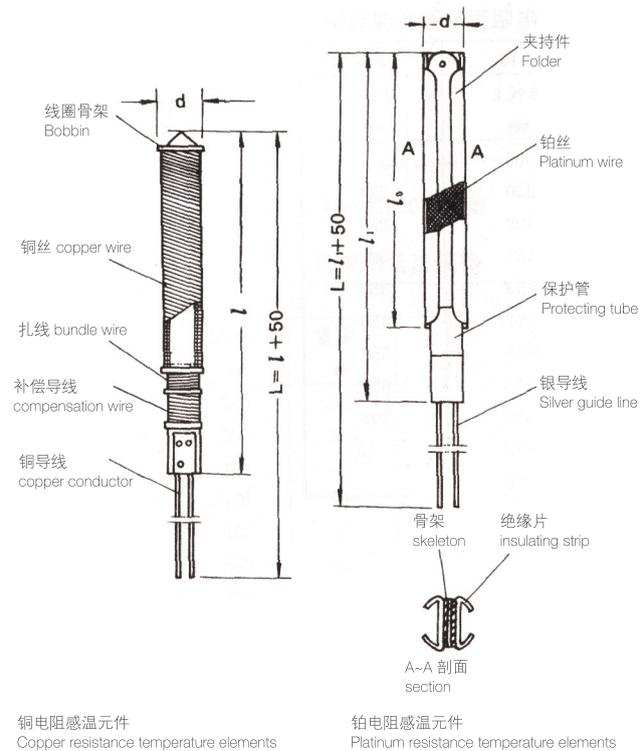

热电阻公称压力 Thermal resistance nominal pressure

一般指在该工作温度下保护管所能承受的外压 (静压) 而不破裂。允许公称压力不仅与保护管材料、直径、壁厚有关, 还与其结构形式、安装方法、置入深度以及被测介质的流速和种类有关。

Usually, it refers to the static pressure the protection tube can withstand under normal temperature. Actually, the allowance working pressure is not only related to the material, diameter, and wall thickness of the protection tube, but it's also related to structure, install method, put into depth and the flow velocity and type of media to be tested.

热电阻最小置入深度 Minimum thermal resistance into depth

$l_{min}=l_{元}+15D$
 l_{min} - 最小可用置入深度 Minimum insertion depth
 $l_{元}$ - 感温元件长度 Temperature elements length
 D - 保护管外径 Protection tube diameter

装配式热电阻

Fabricated thermal resistance

WZ 系列
WZ Series

自热影响

通过热电阻中的测量电流为 5mA 时，测得的电阻增量换算成温度值应不大于 0.30℃。

Since heat affected

When the measuring current through the thermal resistance is 5mA, the incremental resistance measured should not be greater than 0.3℃ when converted to temperature.

绝缘电阻

常温绝缘电阻的试验电压可取直流 10~100V 任意值，环境温度在 15~35℃ 范围内，相对湿度应不大于 80%。常温绝缘电阻值应不小于 100M Ω。

insulation resistance

Normal temperature insulation resistance test voltage can be DC 10~100V, environmental temperature in 15~35 °C scope, relative humidity should be no more than 80%. Normal temperature insulation resistance value should be no less than the 100 M.

工作原理

工业用热电阻分铂热电阻和铜热电阻两大类。热电阻是利用物质在温度变化时自身电阻也随着发生变化的特性来测量温度的。热电阻的受热部分（感温元件）是用细金属丝均匀地双绕在绝缘材料制成的骨架上。当被测介质中有温度梯度存在时，所测得的温度是感温元件所在范围内介质层中的平均温度。

The working principle

Industrial use thermal resistance has platinum resistance and copper thermal resistance two kinds. Thermal resistance measures temperature based on that resistance temperature changes along with the material temperature change. Thermal resistance of heated part (temperature elements) is to use thin metal wire evenly double wrapping the skeletons made of insulation materials. When temperature gradient exists in the tested medium, the temperature measured is the average temperature of the dielectric layer within the scope where the temperature sensing element is in.

装配式热电阻主要由接线盒、保护管、接线端子、绝缘套管和感温元件组成基本结构，并配以各种安装固定装置组成。

Fabricated thermal resistance mainly by the junction box, protection tube, terminals, insulated casing and temperature components basic structure, and matches by the various installation fixed device component.

WZP 型铂电阻的感温工件是一个铂丝绕组，双支铂电阻主要用于需要用二套显示、记录或调节仪同时检测同一地点温度的场合。WZC 型铜电阻的感温元件是一个铜丝绕组。

WZP type of platinum resistance temperature workpiece is a platinum wire windings, double platinum resistance is applicable to occasions where requires secondary display, recorder and regulator at the same time. WZC type copper resistance temperature element is a copper wire windings.

固定螺纹式热电阻 Fixed Thread Thermal Resistance

热电阻类别 Thermal resistance type	产品型号 Product Model	分度号 Graduation No	测量范围 Measuring range (°C)	保护管材料 Protecting Tube Material	规格 Regulation		热响应时间 thermal response time ($\tau_{0.95}$)
					总长 Length (mm)	置深 l Inserted Length (mm)	
单支铂热电阻 Single-piece PT thermal resistance	WZP - 269	Pt100	-200~300	不锈钢 Stainless Steel 1Cr18Ni9Ti	160	75	<30
双支铂热电阻 Double-pieces PT resistance	WZP ₂ - 269				185	100	
铜热电阻 Copper thermal resistance	WZC - 269	Gu50	-50~100	不锈钢 Stainless Steel 1Cr18Ni9Ti	235	150	<45
					285	200	
铂热电阻 Pt thermal resistance	WZP - 270	Pt100	-200~420	不锈钢 Stainless Steel 1Cr18Ni9Ti	95	40	<15
					105	50	
铜热电阻 Copper thermal resistance	WZC - 270	Gu50	-50~150	不锈钢 Stainless Steel 1Cr18Ni9Ti	130	75	<45
					155	100	
铂热电阻 Pt thermal resistance	WZC - 280	Pt100	-200~300	不锈钢 Stainless Steel 1Cr18Ni9Ti	175	75	<30
					200	100	
					250	150	
					300	200	
					350	250	

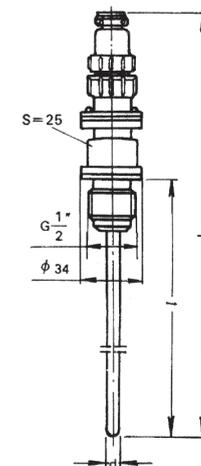

WZP - 270 / WZC - 270

WZP - 280

260、269 型直径型号对照表 260/269 type diameter model comparison table

产品型号 Product Model	直径 d diameter (mm)
WZP - 260	Φ 10
WZP ₂ - 260	Φ 10
WZP - 269	Φ 12
WZP ₂ - 269	Φ 12
WZC - 269	Φ 12

WZP - 260 / WZP₂ - 260 / WZP - 269 / WZC - 269

装配式热电阻

Fabricated thermal resistance

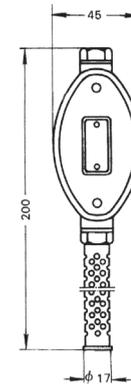

WZ 系列
WZ Series

P-050

特殊用途热电阻 Special usage thermal resistance

室内感温元件 Indoor temperature-sensing element

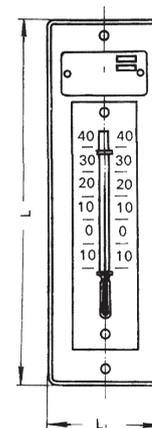

产品名称 Product name	产品型号 Product Model	分度号 Graduation No	测温范围 Measuring Range (°C)	保护管材料 Protecting Pipe Material	高 H Height (mm)	热响应时间 Thermal response time (τ _{0.95} S)
室内用铜热电阻 Indoor Copper Thermal Resistance	WZC — 190	Cu50	-50~100	黄铜 Yellow copper H62	40	<240

190 型

室内感温元件 Indoor temperature-sensing element

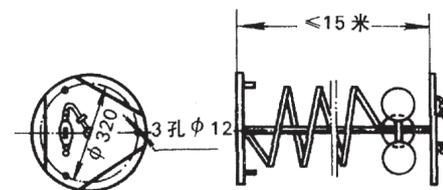

产品名称 Product name	产品型号 Product Model	分度号 Graduation No	测温范围 Measuring range (°C)	材料 Material	规格 Regulation			热响应时间 Thermal response time (τ _{0.95} S)
					长 L (mm)	宽 W (mm)	高 H (mm)	
室内用单支铂热电阻 Indoor single-piece PT thermal resistance	WZP — 892	Pt100	-10~40	塑料	135	42	30	<60
室内用双支铂热电阻 Indoor double-pieces PT thermal resistance	WZP ₂ — 892							

892 型

油灌温度计 Oil tank thermometer

产品名称 Product name	产品型号 Product Model	分度号 Graduation No	测温范围 Measuring Range (°C)	材料 Material	热响应时间 Thermal response time (τ _{0.95} S)	附注
平均温度铜热电阻 Average temperature copper thermal resistance	WZC — 890J	Cu50	-50~50	铝铸件 Aluminium casting	<300	适用：①油的比重在 0.75~0.95 之间 ②油罐高 <15m Suitable: ① The gravity of Oil is between 0.75 and 0.95 ② The height of Oil tank <15m

890J 型

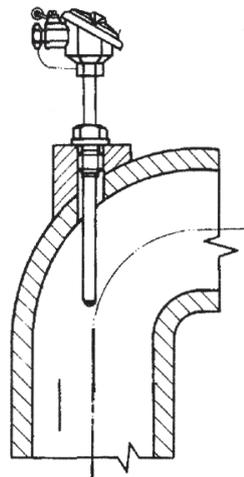

热电阻安装方法 Thermal resistance installation method

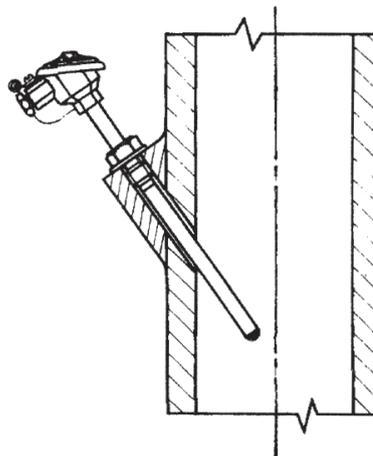

在弯曲管道上的安装方法

Installation method on the winding pipe

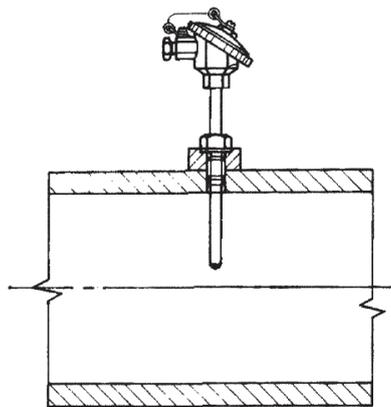

倾斜管通轴线的安装方法

Installation on sloping tube

垂直管道轴线的安装方法

Installation on vertical pipe

锅炉烟道中的密封安装方法

Sealing installation on boiler flue
